

ABSTRACT OF DISCLOSURE

The present invention relates to a supporting structure of a refrigerator having a main body with a storage compartment and a base provided in a lower part of the main body, the supporting structure including a support provided under the main body to support the main body, and a supporting bracket to connect the main body and the support. Thus, according to the present invention, the refrigerator is supported by the support and the supporting bracket, thereby preventing the refrigerator from being overturned during a manufacturing process or a distribution process.
